

In Proceedings of the 2021 CHI conference on human factors in computing systems

# What makes a dark pattern... dark? design attributes, normative considerations, and measurement methods'

Authors: Arunesh Mathur, Jonathan Mayer, Mihir Kshirsagar

Presented by: Parinda Rahman

Supervisor: Dr. Ifeoma Adaji

I would like acknowledge that the land we are on is the unceded territory of Sylix (Okanagan) people

## Outline

- Background
- Paper: Introduction and Methodology
- Paper: Findings
- Extension: Motivation & Introduction
- Extension: Methodology
- Extension: Findings
- Conclusion

# **Background**

- Dark patterns are referred to as manipulative and deceptive design present in the user interfaces (Gray et al., 2018)
- Increased usage of dark patterns in many application such as online shopping, online gaming (Mathur et al., 2019)
- Regulators in the U.S., Congress is considering legislation to restrict dark patterns due to financial and personal harm (Warner et al., 2019)
- Lack of rigid definitions
- Insufficient exploration of the intricate details in dark patterns

# Paper: Introduction & Methodology

#### **AIMS**

- Review the existing literature on dark patterns and identify key definitions, taxonomies, and concepts
- Synthesize diverse definitions from various disciplines such as psychology, economics, ethics
- Develop a set of normative perspectives for analyzing dark patterns and their effects on individuals and society
- Propose empirical research methods to study dark patterns
- Provide a framework for future research to advance the understanding of dark patterns

# Paper: Introduction & Methodology

- **Literature Review:** Comprehensive review of the literature on dark patterns identifying definitions, types of dark pattern and attributes
- **Synthesis of Normative Perspectives:** Connecting themes from different disciplines to a framework for evaluating the ethical implications
- **Development of Normative Lenses:** Describes a set of discrete normative perspectives and a empirical research method that can guide future research on dark patterns.
- Case Study Demonstration: Provides an example of how the "Trick Question" dark pattern can be investigated

#### **Paper: Findings and Key Terms**

| Choice Architecture       | Key Attributes (Required/Optional)  Description |  |  |  |
|---------------------------|---|--|--|--|
| Modify the decision space | Asymmetric                                      | obscure user-beneficial options leading to unequal choices   |  |  |
|                           | Covertness                                      | influences user decisions by hiding the mechanism of influence by capitalizing on cognitive biases or design elements. |  |  |
|                           | Disparate<br>Treatment                          | disadvantage and treat one group of users<br>differently from another  |  |  |
|                           | Restrictiveness                                 | reduces the users' choice by forcing a certain action or limiting options  |  |  |
| Manipulate the info. flow | Deceptiveness                                   | induction of false beliefs through misstatements.  |  |  |
|                           | Information hiding attribute                    | obscures or delays important information from reaching users   |  |  |

#### **Paper: Findings and Key Terms**

| Types of Dark Patterns                | Description   | Types of Dark Patterns | Description   |
|---------------------------------------|---|------------------------|---|
| Scarcity                              | Create a sense of urgency leading users to<br>make hasty decisions<br>Example: Countdown timers, Limited quantity | Sneaking               | Intentionally hiding certain elements,<br>misrepresenting information                             |
| Trick Questions                       | Used to confuse or mislead users, Example:<br>Hidden Agendas, Misleading Choice                                   | Forced action/ work    | Unnecessary or time-consuming tasks, often to the benefit of the platform                         |
| Coercion                              | Social pressure to coerce users into behaviors that benefit the designer or the platform                          | Confirmshaming         | Shaming or guilt-tripping users if they choose an alternative option                              |
| Manipulating Navigation /Misdirection | Confusing or redirecting users within a application to influence their behavior                                   | Monetized Rivalries    | Exploits users' competitive instincts and emotions to encourage them to spend more time and money |
| Obstruction                           | Deliberately obstructs or complicates users' attempts to perform certain actions                                  | Social Proof           | People tend to follow the actions<br>Example: Reviews with unclear origin                         |
| Nagging                               | Persistently and intrusively prompt users to take certain actions   | Cuteness of Robots     | Deliberately designed to be adorable in a way to evoke positive emotions                          |

# Paper: Findings and Key Terms

| Normative Lens       | Description  |
|----------------------|--|
| Individual welfare   | Whether they diminish individual consumer welfare.   |
| Collective welfare   | Whether they diminish collective welfare   |
| Regulatory objective | Democratically created rules and standards<br>to view when dark patterns cause individual<br>and collective harms  |
| Individual autonomy  | Individual autonomy lens is a rights-based lens. Autonomy is the normative value that users have the right to act on their own reasons when making decisions |

### **Extension**

#### **Motivation & Introduction**

- Apply the framework to various application domains
  - Domains: Shopping, Health and Education
- Shopping applications are the most popular category of smartphone applications (Adib & Orji, 2021).
- Evaluate health and fitness smartphone applications ensuring that users' health choices and lifestyles are not manipulated to prevent unintended physical and psychological harm (Thompson 2016; Sax et al. 2018; Zhang et al. 2020).
- In recent years, educational apps have been widely used as a learning tool but dark pattern may have harmful impacts on the effective learning, (Stockman and Nottingham 2024).

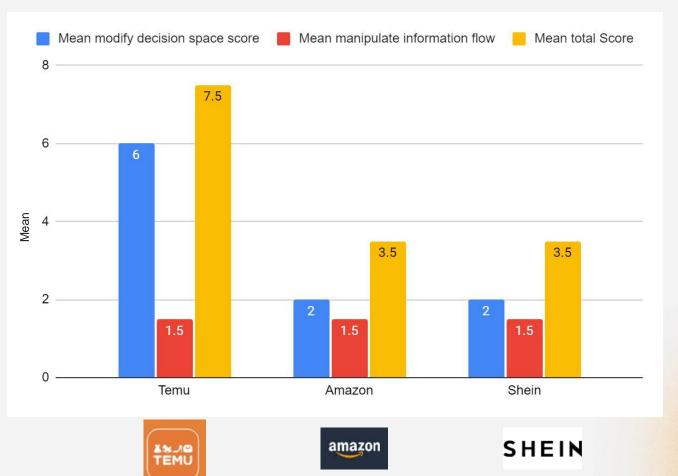

### **Extension**

#### Methodology

- Top 3 applications in Canada on the App Store in each category
  - Health & Fitness: ShutEye Sleep Tracker, Yuka Food Scanner,
     Me+ Daily Routine Planner
  - Education: Duolingo, PhotoMath, PlantIn:Plant Identifier
  - Shopping: Temu, Amazon, Shein
- Identify type of dark patterns from the user experience
- Assign a score of 1 if there is presence of a required attribute, assign a score of 0.5 if there is an optional attribute
- Identify appropriate normative lens for each application category
- Compare the applications and compare across categories

#### Type of dark pattern:

Misdirection

#### **Attribute:**

Asymmetric, Covert

#### **Normative lens:**

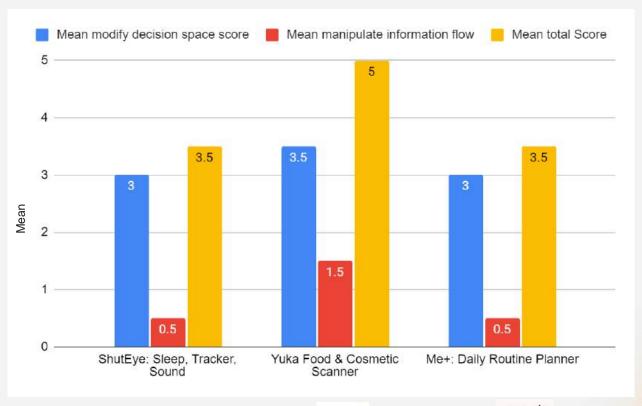

Individual Welfare- Financial loss

| Apps | Type of Dark Pattern   | Modify<br>Decision<br>Space |                       | Manipulate<br>Information<br>flow |                       | Modify<br>Decision<br>Space<br>score | Manipulate<br>Information<br>flow score | Total<br>Score |
|------|--|-----------------------------|-----------------------|-----------------------------------|-----------------------|--------------------------------------|---|----------------|
|      |  | Required<br>Attribute       | Optional<br>Attribute | Required<br>Attribute             | Optional<br>Attribute |                                      |   |                |
|      | Sneaking (Mathur et al.,<br>2019) / Hidden Cost Brignull<br>(2023) |                             |                       | Deception                         | Information<br>Hiding | 6                                    | 1.5                                     | 7.5            |
| TEMU | Scarcity (Mathur et al., 2019)                                     |                             | Covert                |                                   |                       |                                      |   |                |
|      | Confirm-shaming Brignull (2023)/Misdirection (Mathur et al., 2019) | Asymmetric                  | Covert                |                                   |                       |                                      |   |                |
|      | Nagging Brignull (2023)  |                             |                       |                                   |                       |                                      |   |                |
|      | Coercion (Conti et al., 2010)                                      | Restrictive                 |                       |                                   |                       |                                      |   |                |
|      | Trick Questions (Conti et al., 2010)                               | Asymmetric<br>Covert        |                       |                                   |                       |                                      |   |                |

#### Extension: Findings- Health & Fitness Applications

#### Extension: Findings - Health & Fitness Applications

#### Types of dark pattern:

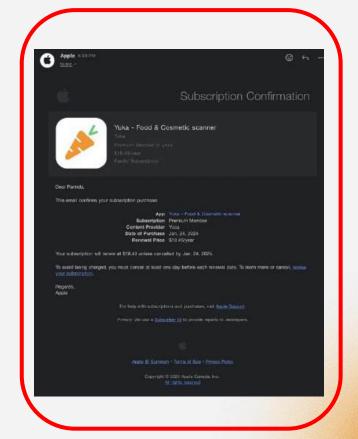

Obstruction

#### **Attributes:**

Restrictive, Information hiding

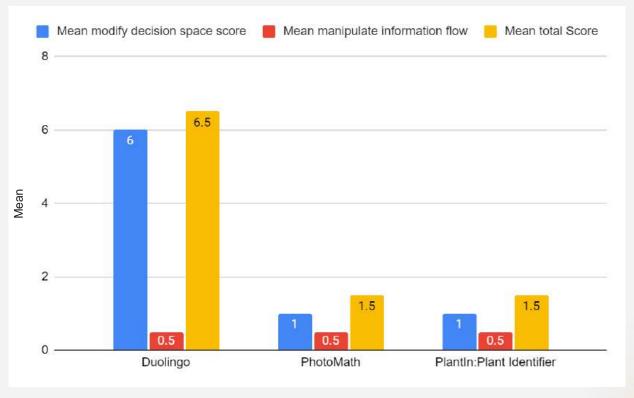

#### **Normative Lenses:**

Individual Welfare , Individual Autonomy

#### **Extension: Findings- Education Applications**

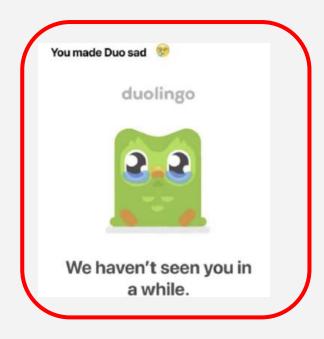

#### **Extension: Findings- Education Applications**

#### **Types of dark patterns:**

**Cuteness of Robots** 

**Attributes:** 

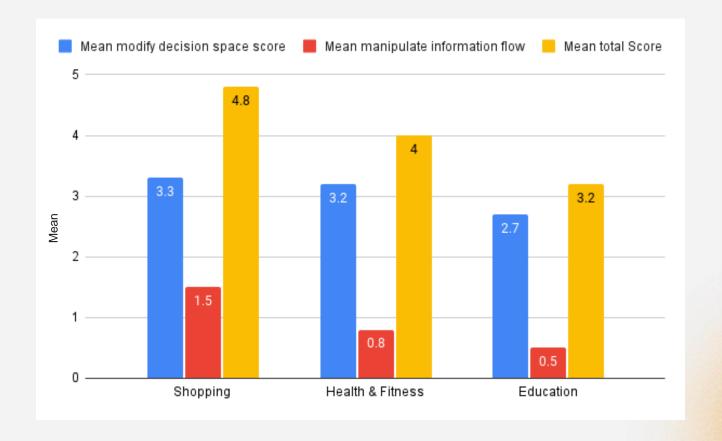

Covert

**Normative Lens:** 

Individual Welfare

# **Extension: Findings- Comparison**

### **Limitations and Future Directions**

- Limited set of applications
- Terminological differences were not considered
- Identified dark patterns may not be exhaustive
- Unconscious researcher bias
- The scoring technique might not fully represent the darkness
- Carry interviews/focus groups with designers
- Extend the framework to understand ethical implications

# **Key Takeaways**

- Dark patterns are most prevalent in shopping applications
- Modify Decision space is the more commonly manipulated choice architecture
- Similar dark patterns identified across applications
- Temu, Duolingo and Yuka Food Scanner reports the highest dark pattern score
